PROJECT EXPERIENCE

Breast Cancer Detection System

- Built and trained several deep learning models to be used in the web application using Tensorflow, Django, python, html, css, bootstrap, javascript and sqlite to classify and segment Cancerous Mammograms. Users can upload a mammogram, predict, and segment on the image and see the results.

DELL HACK 2 HIRE, IT Development Program Managing Application

- Collaborated with a team of 4 utilizing Java and MySQL to develop and integrate a fully functioning system that provided participants and PMs the ability to view, host and join events with an interactive scoring system.

Covid-19 Vaccine Registration System

- Created an app in Android Studio with SQLite allowing users to register for a vaccine at the nearest PPV Centre while allowing users to perform CRUD functions with admin functionality.

Online Examination System

- Led a team of 5 and built a fully functioning system using PHP to be used in schools by students and faculty where students can attend examinations, view standing and results while giving admin permissions to faculties.

Mombasa Tourist promotion website

- Developed website promoting Mombasa by featuring tourist attractions within the city and providing a gallery highlighting key sights and attractions present within the city.

Swimming Club website

- Developed website for INTI Swimming club making use of asp.NET and C# technologies consisting of features such as a mini-E-commerce platform with instant news updates and forums.
